Quantos implements automation in laboratory applications.

Jüke Systemtechnik GmbH

- In Hall 8a, Jüke Systemtechnik is presenting its services for development, production and system integration in medical technology, laboratory technology and optical

technologies. The company develops, manufactures and produces customer-specific components, mechatronic assemblies, complete devices and systems. A current example for a successful development is Chronect Quantos. Drug analysis, food control, environmental analysis, drug development or the precise handling of toxic or expensive substances in the laboratory are just some examples for possible applications in laboratory automation.
